Bellingham + Stanley's UKAS laboratory gains global recognition through ILAC!

Regular verification of laboratory instrumentation is of primary importance in a modern manufacturing facility, not only for reasons of quality control but also as an assurance of plant efficiency.

Depending on the instrument type, application and traceability requirement, a choice can be made from a number of Certified Reference Materials offered by Bellingham + Stanley, a UKAS accredited calibration laboratory No. 0834, that may be used to verify almost any make of refractometer or polarimeter.

All CRMs are manufactured to the highest standards and are certified in accordance with EN ISO/ IEC 17025:2005; with traceability to ICUMSA and NIST or PTB depending on the CRM type.

As the United Kingdom Accreditation Service (UKAS) is one of the signatories to the International Laboratory Accreditation Co-operation (ILAC) Arrangement for the mutual recognition of calibration certificates, all certificates issued by Bellingham + Stanley's UKAS laboratory will be supported by the ILAC-MRA logo, providing local acceptance of accreditation.

Bellingham + Stanley has updated its website and brochures to reflect the changes, including an excellent search facility that helps international users quickly find a local accreditation board that recognizes the UKAS marque.

Please contact Bellingham + Stanley or your local distributor for advice on selecting the correct CRM for your particular application.
